Profile

Full stack web developer interested in design and new or refactored concepts, with experience in Ruby on Rails, Javascript, React, Redux, and Bootstrap; I filtered my way into web development as a synthesis of life-long internet use and 6+ years of desktop Linux experience. I can bring productivity and detail to a team to benefit companies of all sizes and help them realize their potential.

Projects

Calorie Tracker

Developed Rails backend using MVC structure to handle user input and render HTML

Created SQL tables using ActiveRecord to store data of users and the food items they eat, with corresponding join tables

Included Bootstrap to style CSS of interface

Implemented OAuth to allow users to sign up with facebook, traditional logins secured with bcrypt

[Github](#) — [Demo](#)

Vitamin Notes

Wrote Sinatra MVC application with users and a commenting function

Encrypted sensitive information with bcrypt

Used SQL to hold user data

Rendered HTML user interface

[Github](#) — [Demo](#)

World Factbook

Developed/Designed React application with data persistence handled through Rails API Backend

Includes SVG globe rendering library, Wikipedia API integration, and currency exchange functionality, state handled through Redux

Custom, mobile friendly CSS styling

[Github](#) — [Demo](#)

Work History

Linux Blockchain Network Development Engineer (Side Project) – 2018

- Administrated, troubleshooted, and maintained Ubuntu SSH Server and cross-platform SSH tools
- Upload/Download backend of cryptocurrency for testing and validation of transaction using ERC20 tokens
- Oversaw creation of Linux usergroups
- Created bash scripts
- Troubleshooted network issues across platforms
- Wrote tutorial to get a team using a command line for the first time to connect to and interact with a Linux-based SSH Server without needing to ask for clarification

Intern, MGF Law Firm; Clearwater, FL – 2016-2018

- Bulk digitizing of paper documents
